
The Don'ts & Do's of Data Visualization

John Martin | University of Missouri – Columbia

About Me

- Senior at the University of Missouri – Columbia majoring in:
 - Economics
 - Mathematics
 - Statistics
- Researched health economics as McNair Scholar
- Researched affordable housing at SMU's "Data Science for Social Good" REU
- Now a research assistant for Dr. Brittany Street

What Is Data Visualization?

- A Tool for Understanding Information
- A Way to Examine Data Structures, Relationships, and Trends
- A Vital Lever for Telling the Story for Complex Problems

Why Should I Care?

- Credibility
 - Builds Trustworthiness/Ethos
- Communicability
 - Improves Scope of Impact
- Clarity
 - Makes Results Tangible

What Is **BAD** Data Visualization?

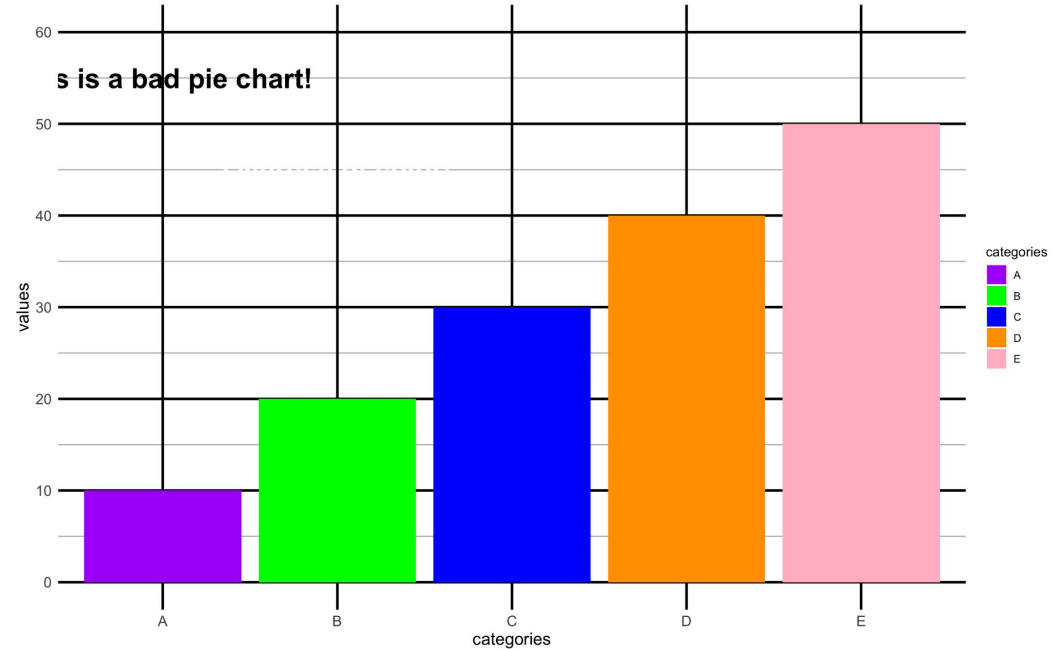

Rules

DON'T:

- Use Pie Charts

DO:

- Use Bar Charts

Exception

Pie charts should be used...

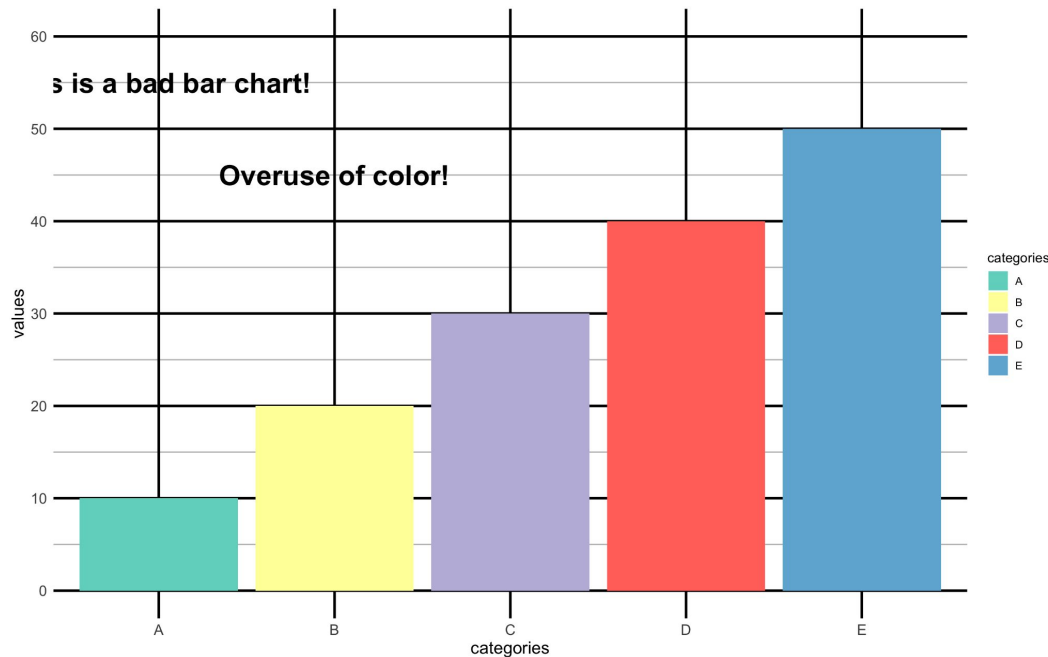

Rules

DON'T:

- Choose **Bad** Colors

DO:

- Choose **Good** Colors

Rules

DON'T:

- Add unnecessary text

DO:

- Be minimal

Exception

Total federal government debt

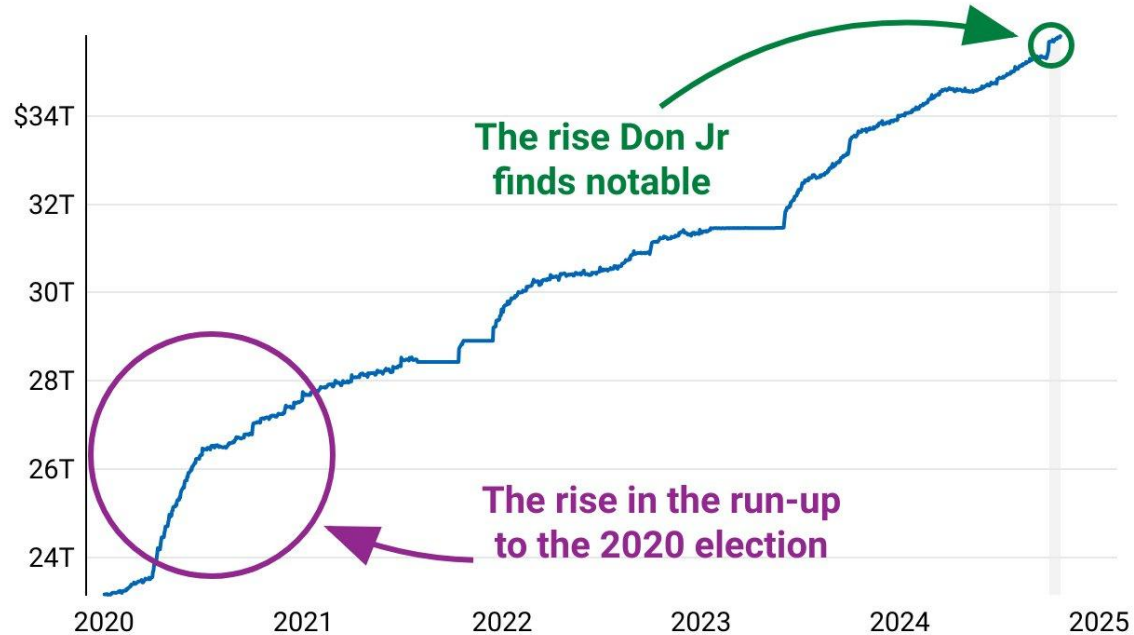

Chart: @JustinWolfers • Source: U.S. Treasury "Debt to the Penny"

Rules

DON'T:

- Add unnecessary gridlines

DO:

- BE MINIMAL

Exception

Rules

DON'T:

- Have redundant legends

DO:

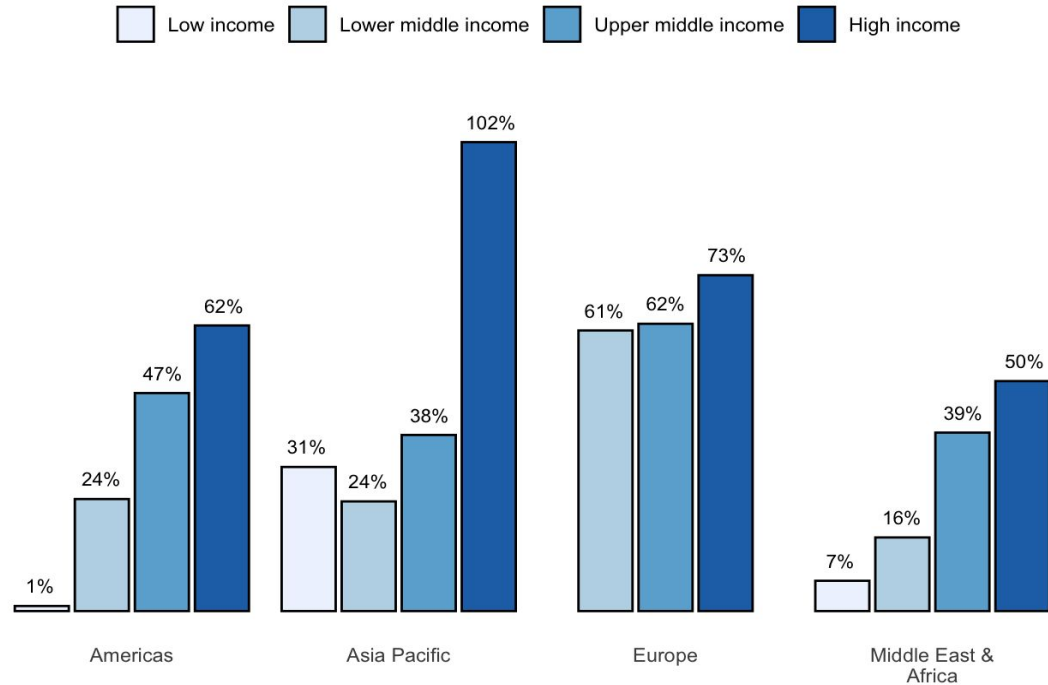

- Consider what is the value-added

Exception

Higher income countries tend to have higher college participation rates

Average college participation by income level and world region in 2020

Rules

DON'T:

- Have inconsistent ranges

DO:

- Ensure visual cannot mislead

President George W. Bush,
The Oval Office, May 15, 2006

Immigration to the United States

From 1820 through 2008, over 74 million people immigrated to the U.S.

T IMMIGRATION PLAN

Rules

DON'T:

- Exclude information

DO:

- Add a title or footnote if needed

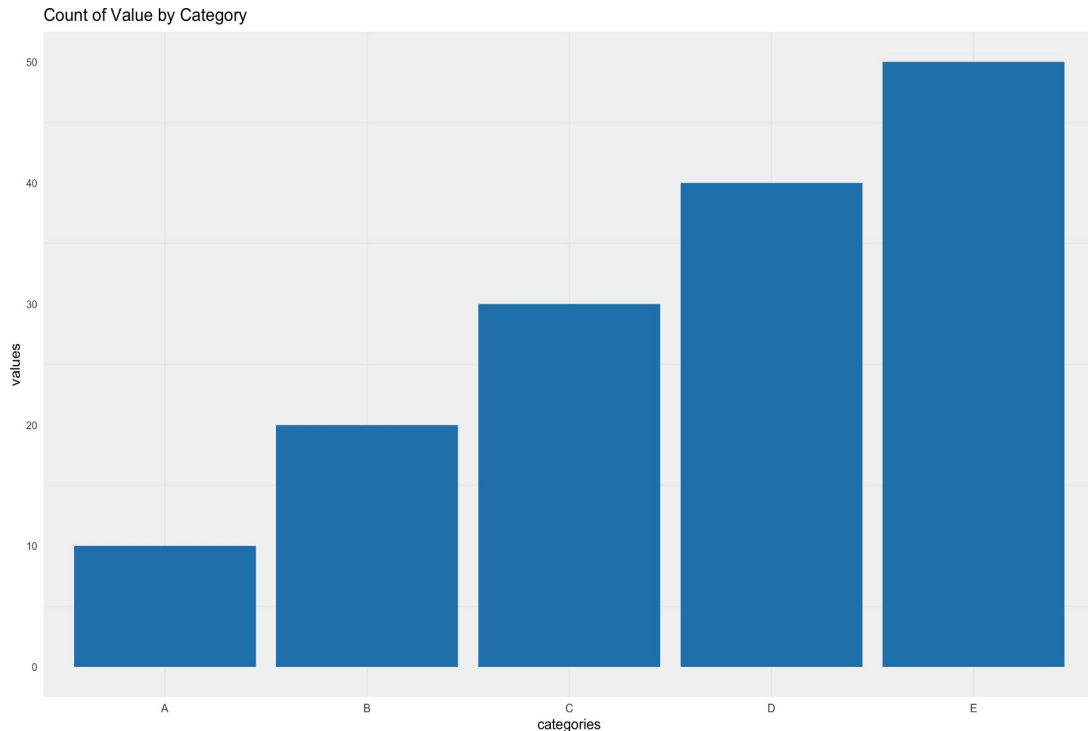

Rules

DON'T:

- Use color without purpose

DO:

- Use color sparingly but intentionally

Non-Data Data Visualization

Data Structure

- We CAN use a visual to better understand the structure and purpose of our data

One Last Don't...

NEVER Make a 3D Chart

- It looks overly complicated
- It makes you look unprofessional
- It is no better than a 2D Chart

Make charts as **concise** as possible such that every aspect of the chart has a **tangible and information-based** reason to be included. Your data is meant to tell a **story**.
